

To Whom It May Concern:

I would like to place on record my views on BPL. I am a federally licensed Radio Amateur, and a member of the ARRL. The ARRL has undertaken tests, where BPL is on trial and the interference to the HF spectrum from the BPL signals are diabolical.

Several thousands of HAMS, give up their time to operate when emergencies occur

Such as 9/11, with BPL in the picture, some of the services offered by these hams would be rendered useless.

So as a licensed radio ham, I am totally against BPL, this will also affect not only radio hams, but also many commercial radio users, such as ARINC for aeronautical communications, US Govt. for Military communications, (Army, Navy, USAF). Local and state govts. Who use low band VHF radios.

BPL is one big nightmare for all radio users....
